

Innavik Hydroelectric Project

Mercury Assessment

Jean Therrien, biol., mercury/fish scientist

January 2020

Innavik Hydroelectric Project

Mercury in natural environment

→ Mercury (neutral form)
→ Mercury (adverse form)

Innavik Hydroelectric Project

4 of 7 species of fish sampled in the region of Inukjuak in July 2019 were analysed for Mercury.
2 species that do not eat fish (NF) and 2 species that eat fish (F).

Brook Trout (NF)

Lake Whitefish (NF)

Lake Trout (F)

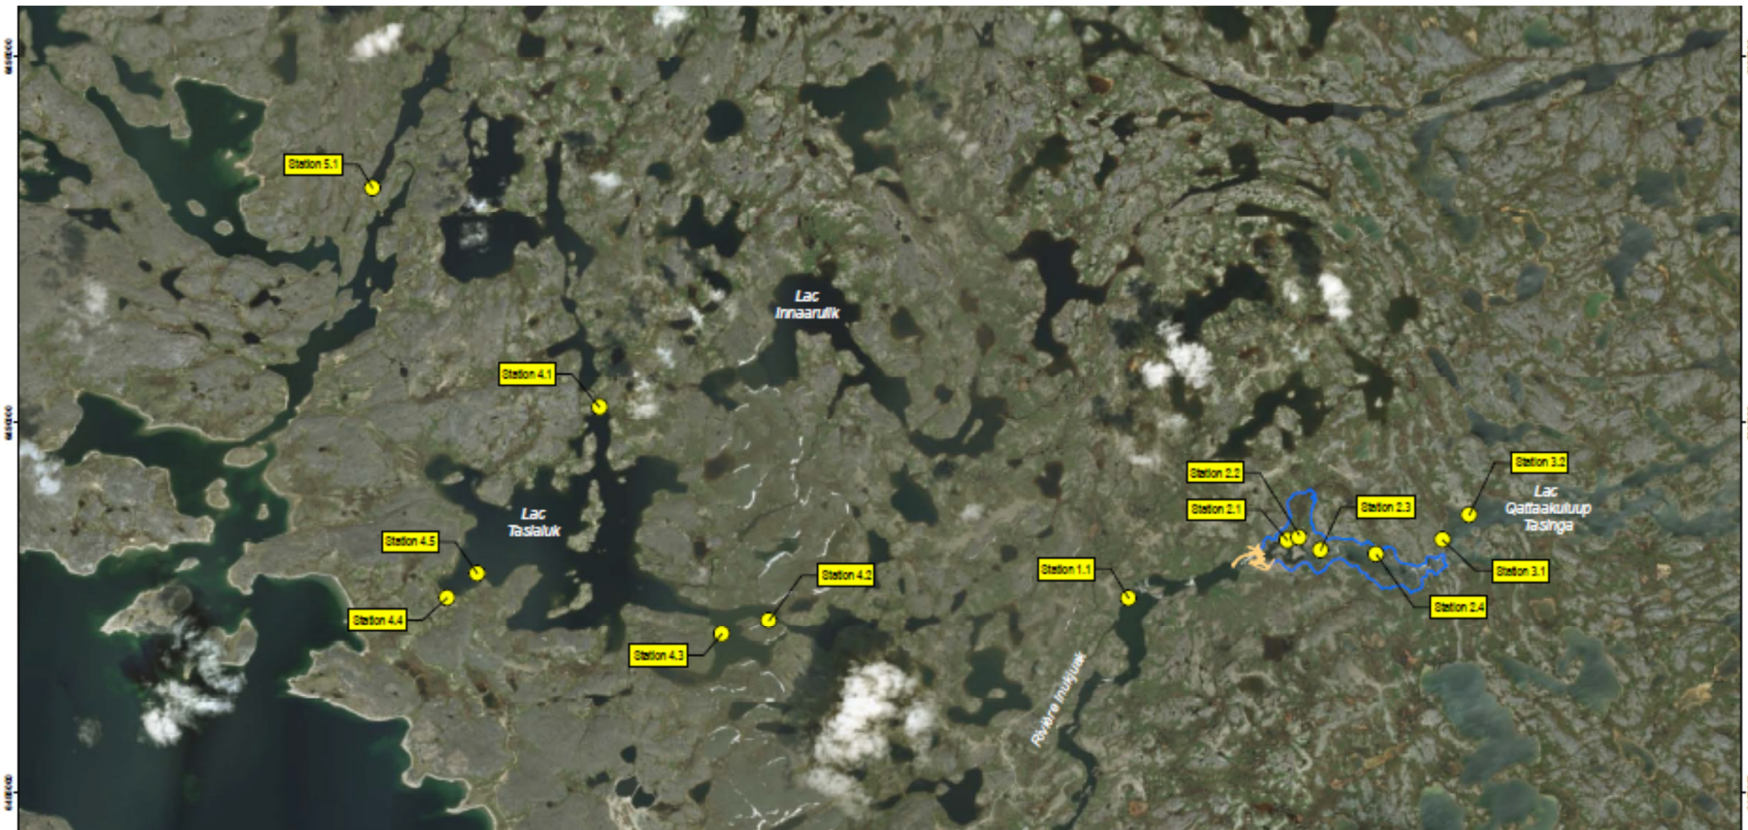

Landlocked Atlantic Salmon (F)

Innavik Hydroelectric Project

3 Bodies of water sampled : Inukjuak River (including Lake Qattaakuluup Tasinga), Lake Tasialuk, lake North of the village).

Innavik Hydroelectric Project

Range of average total mercury concentrations in 16 in. Lake Whitefish of natural lakes and rivers (number in parenthesis) of 5 Boreal/Nordic regions.

Average length in 2019 sampling = 14 in.

From Schetagne
et al. and Inukjuak
2019 sampling

Innavik Hydroelectric Project

Range of average total mercury concentrations in 24 in. Lake Trout of natural lakes and rivers (number in parenthesis) of 4 Boreal/Nordic regions.

Average length in 2019 sampling = 16 in.

From Schetagne
et al. 2003;
Inukjuak 2019
sampling

Innavik Hydroelectric Project

Brook Trout

Average length in 2019 sampling = 13 in.

Average mercury concentration :

- 0.10 ppm at 12 in.
- 0.16 ppm at 16 in.

Landlocked Salmon

Only one capture in 2019 sampling.

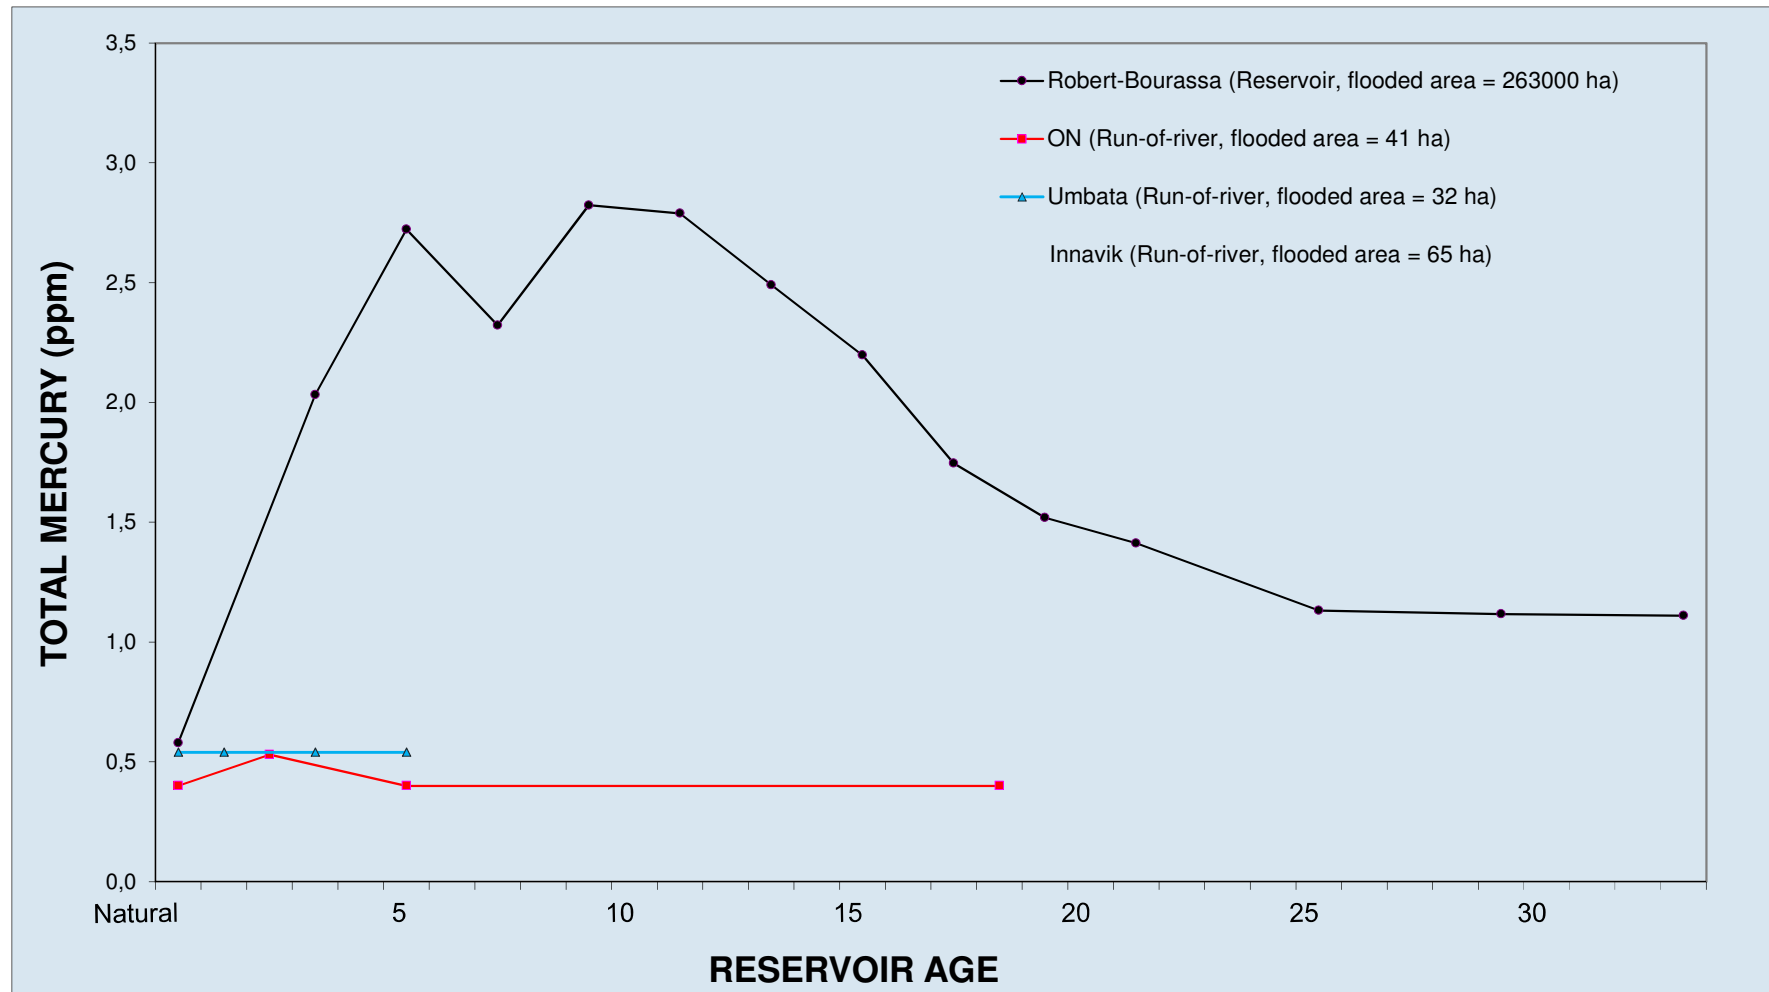

Length = 10 in.

Mercury concentration : 0.06 ppm.

Innavik Hydroelectric Project

Comparison between reservoir and run of the river hydroelectric project for 16 in. Walleye

From Schetagne
et al. 2003; Beals,
Harris and
Therrien 2015

Innavik Hydroelectric Project

Mercury in fish monitoring following the construction

Years after the construction: 3, 5, 7, 10 (if needed) and 15 (if needed).

Monitoring years: 2025, 2027, 2029, 2032 (if needed) and 2037 (if needed).

Area sampled:

- Upstream of the generating station (headpond and lake Qattaakuluup Tasinga).
- Downstream of the generating station.
- Reference lake.

Sampling done in the summer.

Target of 30 fish from each area and each of 2 species of fish (Lake Whitefish and Lake Trout):

- total of 180 fish each year of monitoring.
